

# Non Glare

## Reduction of Light Reflections

For electronic displays in which significant reduction of disturbing light reflections is important, PSC offers a range of non-glare surface treatments.

### The Solution

When perfect optical performance with a significant reduction of disturbing light reflections is top priority, a non glare surface treatment is the right solution for your display.

Depending on the specific demands for additional features, different non-glare coatings are available. PSC offers features such as an exclusive look, scratch and chemical resis-

tance, outdoor durability, high optical performance and uniform mat appearance.

### Typical Applications

The non-glare surface treatments are typically used for displays in a wide range of indoor and outdoor applications.

### Customisation

The non-glare coatings are available in several application specific versions, as

e.g. Fine Mat, Hard Mat, Hard Mat Exterior and Cleartech Mat. These coatings can be combined with EMI shielding and applied to both clear and tinted material.

PSC supplies finished display windows according to application specific needs such as milling, silkscreen printing and pre-assembly.
