DESCRIPTION

RAC20NE-K open frame or encapsulated solder mount built in power supplies are optimized for the requirements of new energy applications such as energy management, monitoring or actuator operation. These compact AC/DC modules meet increased requirements in terms of ambient temperatures, high immunity levels against transients, adopted insulation barriers, EMC interference freedom with secondary ground or earth coupling and low power loss in full load operation as well as in standby and sleep mode. For the supply of universal input voltages of 100 to 277 VAC, the modules are available in various versions according to worldwide industrial, household and safety transformer standards at operating altitudes of up to 5000 m or up to 3000 m under OVC III approved. High effective power density and industry standard P12 pinning on a 1"x2" footprint fits in space critical applications.

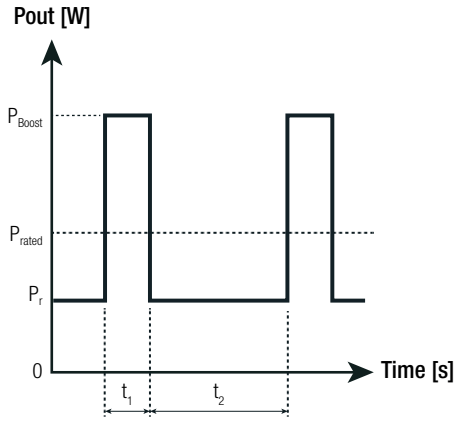
BOOST POWER DUTY CYCLE (EXCEPT “/OF” AND “/CC” MODELS)

P_{rated} = refer to **„Derating Graph“** [W]
P_{Boost} = Boost power (≤23W) [W]
P_r = recovery output power [W]
t_1 = Boost time set (20s max.) [s]
t_2 = recovery time (min. 2 x t_1) [s]

$$P_r = \frac{P_{rated} \times (t_1 + t_2) - (P_{Boost} \times t_1)}{t_2}$$



Practical Example (RAC20NE-12SK/277):

Take the RAC20NE-12SK/277at 230VAC input Voltage and full load at T_{AMB}= 80°C ,with natural convection.

P_{rated} = 10W
P_{Boost} = 23W
t_1 = 20s
t_2 = 50s

$$P_r = \frac{10W \times (20s + 50s) - (23W \times 20s)}{50s} = \underline{4.8W}$$
