

Technical Data Sheet

ECS Thinner

Art. Nr. 775.L01 / 775.L05 for Plastic

Product Description

Thinner for ECS Plastic

Application

The mixing ratio is always dependent on the type of spray application or dipping method. According to the desired flow behavior, the corresponding quantity of diluent is to be mixed with the concentrate.

For the spray application, a dilution with a ratio of 1: 1 is recommended, which results in a very good flow behavior at a low layer thickness.

For thicker layers, a mixing ratio of 3 parts concentrate to 1 part thinner can be used.

Caution: Water-containing solvents and alcohols must not be used for dilution.

Please note

The data in this information sheet is considered reliable. However, the content is without regard to the processing and application without legal liability, since these are not our influence. We reserve the right to make changes or improvement.

Technical Data

Color:	Transparent
Density Thinner Plastic:	0,88g/cm ³
Density Thinner Urethane:	0,738g/ cm ³
Unit Sizes:	1L / 5L
Units/Carton:	12 Tins / 4 Tins

Storage / Shelf Life

Shelf life is 4 years if stored correctly.
